TITLE : PERCUTANEOUSLY ABSORBABLE TYPE PHARMACEUTICAL

ABSTRACT : PURPOSE: To obtain a percutaneously absorbable type pharmaceutical of a dihydropyridine-based calcium antagonistic agent readily absorbable from the skin.

CONSTITUTION: A percutaneously absorbable type pharmaceutical is composed of a dihydropyridine-based calcium antagonistic agent and cyclopentadecanolide (CPL). Since the CPL is used as a percutaneous absorbefacient, the dihydropyridine-based calcium antagonistic agent can efficiently be absorbed from the skin. The aforementioned percutaneous absorbable type pharmaceutical is capable of sustainedly and efficiently absorbing the dihydropyridine-base calcium antagonistic agent. Thereby, the pharmaceutical is useful for preventing and treating fit of angina pectoris.
